DETAILED ACTION

This communication is in résponse to the application filed on November 25,
 Claims 1-22 are presented for examination.

Applicant's claim for foreign priority is hereby acknowledged

References in applicant's IDS form 1449 have been considered.\

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 11 and 22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear from the claim language the importance of the "notification message issue number" and how it relates to the actual message notification.

Claim Rejections - 35 USC §102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 122, are rejected under 35 U.S.C. 102(e) as being anticipated by Freivald et al., (Freivald) U.S. Patent No. 5,898,836.

5. As to claim 1, Freivald teaches an update notification device for repeatedly accessing at least one Web site identifiable with a preset address and outputting a notification message including the presence or absence of the update to the outside if any web page has been updated in the Web site, the device comprising:

updated data extracting means for extracting updated data from the updated Web page (col. 6, lines 20-31, the software tool retrieves files and compares the file to an archived checksum of the file to determine if a change has occurred); and

updated data output means for, in outputting, adding to the notification message one or both of the header of the updated data and the updated data and the address of the Web page (col. 6, lines 20-31, if a change is detected then the uses is notified and a copy of the new file may be attached).

- 6. As to claim 2, Freivald teaches an update notification device according to claim 1, wherein the updated data extracting means extracts the updated data from the differential information piece in character or line between the previous data and latest data of the Web page (col. 1, lines 41-47, col. 2, lines 17-21, col. 7, lines 1-17).
- 7. As to claim 3, Freivald teaches an update notification device according to claim 2, wherein the updated data extracting means has means for converting the updated data to a main passage when the size of the differential information piece is equal to or more than a predetermined threshold value (col. 12, lines 48-56).

Art Unit: 2155

- 8. As to claim 4, Freivald teaches an 4. An update notification device according to claim 1, wherein the updated data extracting means extracts the updated data from a differential information piece of a part determined by a template held in advance in accordance with the Web page (col. 1, lines 41-47, col. 2, lines 17-21, col. 7, lines 1-17).
- 9. As to claim 5, Freivald teaches an update notification device according to claim 4, wherein the updated data extracting means has means for converting the updated data to a main passage when the size of the differential information piece is equal to or more than a predetermined threshold value (col. 12, lines 48-56).
- 10. As to claim 6, Freivald teaches an update notification device according to claim 1, further comprising:

notification-receiver's address holding means for holding the address of a user terminal for receiving an update notification with respect to each of the at least one Web site (see Fig. 4, col. 6, lines 32-46),

wherein the updated data output means sends a notification message having the updated data to the address of the user terminal with respect to each of the at least one Web site (see Fig. 4, col. 6, lines 55-67).

11. As to claim 7, Freivald teaches an update notification device according to claim 6, wherein the notification-receiver's address holding means further has means for holding at least one keyword with respect to the address of the user terminal, wherein the updated data extracting means has means for removing the differential information

Art Unit: 2155

piece from the updated data when the differential information piece does not include the held keyword (col. 7, lines 1-16).

12. As to claim 8, Freivald teaches an update notification device according to claim 6, wherein the notification-receiver's address holding means further has means for holding at least one keyword with respect to the address of the user terminal (col. 7, lines 1-16),

wherein the updated data extracting means has means for compiling the rank, which indicates the degree-of-attention of the Web page, in accordance with the frequency of occurrence of updated data having a keyword corresponding to each of the entire user terminals (col. 12, lines 48-56).

- 13. As to claim 9, Freivald teaches an update notification device according to claim 1, wherein the updated data output means has means for creating the notification message in accordance with a predetermined template before the output of the notification message (col. 12, lines 33-41).
- 14. As to claim 10, Freivald teaches an update notification device according to claim 1, wherein the updated data output means has means for creating the title of the notification message from the updated data (col. 12, lines 33-41).
- 15. As to claim 11, Freivald teaches an update notification device according to claim 10, wherein the updated data output means has means for giving, to the title of the notification message, a notification message issue number incremented for each output or each of the notification-receivers' addresses (col. 12, lines 33-41).

Art Unit: 2155

16. As to claims 12-22, they do not teach or define any new limitation above claims 1-11; therefore, they are rejected for similar reasons.

17. **Examiner's note:** Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in its entirety as potentially teaching of all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawki S Ismail whose telephone number is 571-272-3985. The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Saleh Najjar can be reached at 571-272-4006. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

Art Unit: 2155

you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
